

Solution providers for software design, application life cycle management and software development services.

UML & Enterprise Architect – Training and Consulting

As global training partners for Sparx Systems, Dunstan Thomas Training has the hands on expertise to deliver not just a standard course but to add that touch of “real life experience” needed to ensure our client gets the most out of their Enterprise Architect training and consulting.

UML with Enterprise Architect – 2 days

This two day training course, intensive UML with EA covers all of the UML diagrams in detail, Class and Object diagrams are covered together, as are collaboration and sequence diagrams. The course starts with a basic introduction to Enterprise Architect, the way in which projects should be ordered, how it should be used, and how to generate documentation from it.

Every section is followed by an exercise. In the case of the UML diagrams, each exercise has two parts. The first is a rich example of the diagram that is copied into EA to practice using the tool, the second is a real-life situation or specification that is modelled using UML, partly on paper, and then transcribed into Enterprise Architect.

Object Oriented Analysis and Design using Enterprise Architect – 5 days

The application of OOA/D techniques training course has substantial benefits in reducing system development risks and improving the quality of object-oriented software developments. UML (the Unified Modelling Language) has emerged as the de-facto standard for OO modelling techniques. This intensive hands-on workshop, you will gain practical experience of the major techniques of UML using the Enterprise Architect case tool.

Mentoring: Introducing change into a company can present a significant organisational disruption, its implementation fraught with risk and challenges. Change; however is a positive force that creates business opportunity and a competitive advantage.

Dunstan Thomas consultants are often used as catalysts for change bringing with them experiences and expertise to help implement change. Our staff are highly skilled professional software developers themselves. With mentoring, we become part of your development team.

Our staff are passionate and evangelical about software best practice and leading edge technologies. As they are integrated into your project teams they participate as a team member, the return on investment is clear. In practice, we work as a hands-on extension to the development team - not just for the duration of a project, but on a continuous basis.

Technical Overview: Consider this service as a “Health Check”. This can be delivered at any frequency, such as four or five days per month for the duration of the project. This time can be used to set targets for the team, ensure that all processes and best practices are followed and gives the team a chance to discuss any issues they may have. In effect Dunstan Thomas adopts a project role that is delivered in non contiguous timeframes

Ad Hoc Consultancy: Our clients can use our services as and when needed, either during the analysis, requirements capturing, modeling or implementation phases.
